

What is Apppsilon?

We are a team of data scientists and full stack engineers who create custom data solutions. We work mostly in R and Python. We handle everything from data preparation, to statistical modelling & ML, to setting up an infrastructure and implementing advanced dashboards.

Every project is an exciting new challenge, and there are many opportunities to solve problems in various industries. Some examples:

- 1) A custom dashboard for port analytics using AIS positioning data created in [R/Shiny](#)
- 2) An ML model that accurately detects wildlife, developed for Serengeti Park (Tanzania)
- 3) An ML model that automatically assesses community damage from satellite images after natural disasters

Useful Facts

2013

Founded in 2013 by 4 full stack engineers from Google and Microsoft who won the [Global Management Challenge](#) using data science

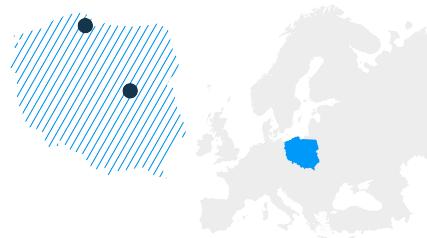

Multinational Team of 25+
World Class Specialists

Data Scientists, Full Stack Developers, Front-End Developers, Graphic Designers, Software Architects, ML Experts

500

2 offices

Warsaw, ul. Chmielna 21/10
Gdańsk, ul. Grunwaldzka 212/3.4-3.5
Flexible Hours & Remote Work

We work with Fortune 500 companies in time zones all over the world, from Hong Kong to London to San Francisco. We travel to a lot of interesting places.
