

What is Apppsilon?

We are a team of data scientists and fullstack engineers who create custom data solutions. We work mostly in R and Python. We take care of everything from data preparation, statistical modelling & ML, to setting up an infrastructure and implementing advanced dashboards.

Every project is an exciting new challenge, where we learn new things about specific industry. See some examples below:

- 1) Dashboard for port analytics using AIS positioning data, created in [R/Shiny](#)
- 2) Short movie presenting our ML model detecting animals, developed for Serengeti Park (Tanzania)
- 3) ML model automatically assessing damages after natural disasters such as tsunami

PyTorch

Useful Facts

2013

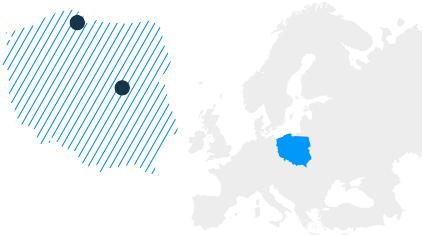

Founded in 2013 by 4 fullstack engineers from Google and Microsoft who won [Global Management Challenge](#) using data science

Multinational Team of 20+
top class specialists

data scientists, full stack developers,
front-end developers, graphic designers,
software architects

2 offices

Warsaw, ul. Chmielna 21/10

Gdańsk, ul. Grunwaldzka 212/3.4-3.5

500

Working with Fortune Top 500 companies in different time zones, from Hong Kong to London to San Francisco. We visit a lot of interesting places!
